

SlickEdit® Core v3.7 for Eclipse™

All editors are not created equal. At SlickEdit, our belief is that it's the code that really matters. SlickEdit Core is designed for power programmers by power programmers. We take great pride in delivering unparalleled power, speed, and flexibility to our customers. Our goal is to remove the tedious tasks involved with programming, allowing you to focus on the reason you first got into programming: the thrill of writing great code.

SPEED

Use SlickEdit Core to write more code in less time.

- Type fewer characters and make fewer errors using syntax expansion, completions, aliases, and code templates.
- Context Tagging® builds a database of your symbols, allowing you to quickly navigate from a symbol to its definition or references without searching.
- Use commands and key bindings to keep your hands on the keyboard for maximum productivity.

POWER

SlickEdit Core provides the power to work with your real-world projects.

- Edit files up to 2 GB in size.
- Utilities for diffing files, testing regular expressions, and powerful search and replace.
- Extend the capabilities of SlickEdit Core using the Slick-C® macro language.

FLEXIBILITY

All programmers are different. SlickEdit Core lets you work the way you want.

- Configure SlickEdit Core to match your coding style.
- Choose from 14 editor emulations.
- Customize Core's menus, key bindings, and mouse operations.

Cool Features

Code Navigation

Use Ctrl+Dot to jump from a symbol to its definition. Use Ctrl+/ to list all of the references for the current symbol and optionally jump to the first reference.

Preview View

Displays the definition of the current symbol in the editor window, allowing you to see the definition without having to open a separate buffer.

References View

Displays the list of references for a symbol. Use a single keystroke to open the References view for the current symbol, or you can type or select a symbol in the Symbol drop-down list.

Syntax Expansion

Expands common block structures (*if, for, try, etc.*) when the initial keyword is typed.

Surround With

Use to surround existing lines of code with a new structure (*if, for, try, etc.*). The existing code is automatically placed inside braces and indented.

Auto-Completions

Reduce keystrokes by automatically completing symbols as you type.

DIFFzilla®

Provides editable dynamic differencing and merging for files, directories, and source trees.

Auto Close and Overtyp

Typing an open parenthesis, square bracket, angle bracket, double quote or single quote will automatically insert the corresponding closing symbol. When the cursor is positioned in front of a closing symbol, typing the closing symbol will move the cursor after the closing symbol instead of inserting another closing symbol.

Smart Line Selections

Line selections for single or multiple lines are pasted above or below the current line of code.

SmartPaste®

Line selections are automatically formatted when pasted.

Code Quick | Think Slick®

SlickEdit® Core v3.7 for Eclipse™

New Features

64-bit Version for Windows

A native 64-bit version of SlickEdit Core for Eclipse is now available for Windows. This version requires a 64-bit JVM. A 64-bit version of the plugin is not yet available on Linux.

Multithreading

Parts of SlickEdit Core have been reengineered to be multithreaded, making better use of available CPU resources and reducing the waiting time for affected operations.

Improved PL/I and COBOL Support

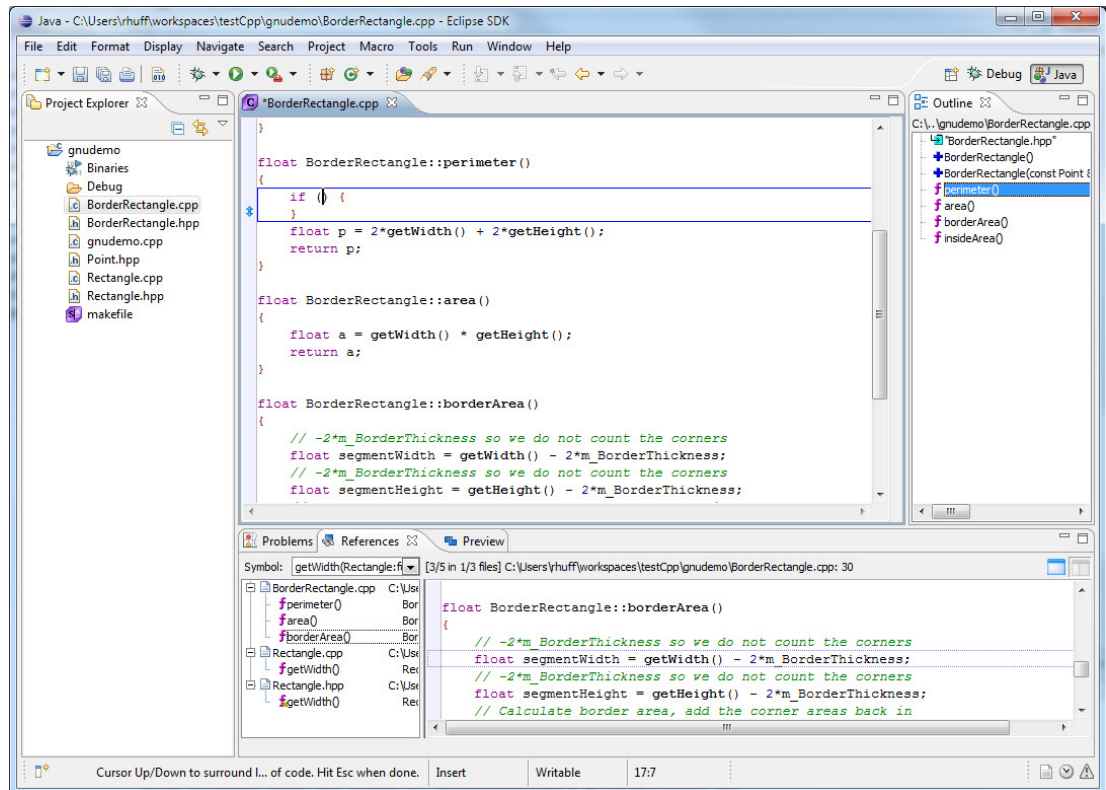

All supported Context Tagging operations for PL/I and COBOL are improved in this version, with upgraded or newly implemented parsers. Includes/copybooks are now tagged at parse-time. Background tagging is supported for both languages.

Workspace Tagging Excludes

SlickEdit Core will automatically tag all source files in your Eclipse workspace. The Workspace Tagging Excludes feature allows you to specify absolute paths or partial path components in your workspace which you want to be excluded from automatically being tagged.

Auto-Reload on a Thread

Auto-reload now uses a thread to access files, preventing SlickEdit from hanging due to unavailable resources. Auto-reload is still performed when you switch applications.

Dynamic Surround - Use the arrow keys to dynamically expand and contract block statements, like *if* and *for*, after syntax expansion.

System Requirements

Microsoft® Windows® 7, Vista, XP, or Windows Server 2008

- 32-bit/64-bit Java 5 or later from Sun or IBM
- 150 MB available hard disk space
- Eclipse 3.4 - 3.7
Optional: CDT, JDT, and PDT are required for building, running, and debugging C/C++, Java, and PHP, respectively
- 256 MB minimum recommended memory

Linux® (32 bit or compatible, x86 kernel 2.6 or later, and LSB compliant)

- 32-bit Java 5 or later from Sun or IBM
- 150 MB available hard disk space
- 32-bit Eclipse 3.4 - 3.7
Optional: CDT, JDT, and PDT are required for building, running, and debugging C/C++, Java, and PHP, respectively
- 256 MB minimum recommended memory

Languages Supported

SlickEdit supports over 40 languages, including C/C++, Java™, JavaScript™, HTML, XML, SQL, Perl, PHP, Python™, C#, COBOL, PL/I, Fortran, Ruby, and Visual Basic®. For a complete list of languages supported, visit www.slickedit.com/languages.

About SlickEdit Inc.

SlickEdit Inc. provides software developers with multi-language development tools and the most advanced code editors available. Power programmers, from Fortune 500 companies to individuals, have chosen SlickEdit as their development tool of choice for over 20 years. Proven on Windows, Linux, UNIX, and Mac OS X platforms, SlickEdit products enable even the most accomplished developers to write more code faster and more accurately. For more information about SlickEdit and free trial downloads, please visit www.slickedit.com.
